About Me

Software exists so people can get something done, not to be studied or figured out. If someone has to think about how to use an interface rather than what they're using it for, the design has failed. That's why minimal, clear interfaces get understood and used faster than cluttered ones, and I chase that down to the smallest detail: spacing, copy, interactions, and timing, whatever it takes to remove friction. My heart beats engineering. I care about how something is built as much as how it looks, because a beautiful interface on shaky engineering is still a broken product. My friends and I are building Zill, campus e-commerce infrastructure, and I'm independently building Luna, a privacy-first period-tracking app, and Köfi, a cafe. I've also taken on independent projects like Rowbo, a web-building service for small businesses, and web3 work including Xeno and CoinRush.

Education

Software Engineering

Mountain Top University · Currently Studying

Notable Work Experience

Lead UI/UX Designer & Lead Frontend Dev

2026 - Present

Zill

- Leading design and frontend development for Zill, a hyper-local e-commerce marketplace for verified Nigerian university students
- Built core product features including branded seller subdomains, a live price-negotiation engine, and a Business Credibility Score for sellers

iOS Engineer & Design Engineer

2026 - Present

Luna

- Solo-designed and built Luna, a privacy-first iOS period tracking app with on-device ML and Secure Enclave encryption, requiring no login
- Authored full product documentation, including 14 user flows and a 67-screen design checklist, as lead design engineer, iOS engineer, and PM

Brand & Logo Designer

Aug 2025

Xeno · Remote

- Designed distinctive brand identity for cryptocurrency platform
- Crafted logo that communicates trust and innovation in Web3 space

UI/UX Designer

Feb 2024 - April 2024

MyYoga · Remote

- Designed iPhone & iPad applications for yoga platform
- App serves 50k+ monthly active users
